SUMMARY

Front-end engineer and team lead with five years of experience building e-commerce and fintech products spanning merchant platforms, digital payments, payment gateways, checkout, and order management. Hands-on expertise in React, Next.js, React Native, TypeScript, and scalable design systems. Proven in cross-functional delivery, mentoring, engineering standards, production incident resolution, performance optimization, maintainability, and release quality.

EXPERIENCE

Front-end Developer → Delivery Lead & Merchant Experience Team Lead

Hello Clever Pty Ltd

01/2022 - Present

- Led delivery for a 10-12-person team and directly mentored 6 front-end engineers through regular catch up, technical guidance, and code reviews.
- Coordinated with product managers, back-end engineers, and QA engineers to clarify requirements and manage scope, priorities, task allocation, dependencies, progress, and delivery risks.
- Established front-end architecture, coding conventions, reusable components, and design system standards while overseeing production hotfixes, performance optimization, maintainability, and release quality.

1. Hello Clever Landing Page

- Architected and launched the Hello Clever marketing site with Next.js and Tailwind CSS, establishing the project structure, core logic, initial UI, reusable components, and design system.
- Later delegated enhancements and maintenance to team members while retaining responsibility for code quality, production hotfixes, and performance optimization.

2. Merchant Dashboard

- Developed the Merchant Dashboard from the ground up, supporting multi-currency balances, payment requests and shareable payment links, settlement requests, API key management, transactions, and transfers between internal accounts or external destinations.
- After moving into a lead role, handed day-to-day development to team members and focused on delivery, code reviews, production hotfixes, and performance optimization.

3. Internal Admin Portal

- Created the restricted internal portal for authorized users to manage data synchronized from the Merchant Dashboard and perform admin-only operations.
- Implemented merchant and payment management, unmatched payment handling, payout monitoring and status updates, fund allocation, settlement tasks, treasury transactions, blacklisting by customer, name, email, or keyword, and merchant balance top-ups.

4. Hello Clever Consumer Mobile App

- Delivered the customer mobile app with React Native and easy-peasy, covering KYC, card management, cashback management and redemption, and cashback-enabled deal discovery.
- Implemented push notifications, deep links, biometric authentication, and map and location services.

5. Payment Gateway v1 & v2 - AUD

- Developed and maintained the AUD Hosted Checkout with React, TypeScript, Tailwind CSS, Ant Design, and easy-peasy, supporting PayID, cards, Apple Pay, Google Pay, and legacy PayTo demo flows.
- Enhanced the original implementation across versions 1 and 2, including merchant-specific configuration and payment-status polling.

KEY ACHIEVEMENTS

Career Progression & Team Leadership

Progressed from Front-end Developer into dual leadership roles, with responsibility for delivery coordination and mentoring 6 front-end engineers.

Front-end Product Ecosystem

Established shared front-end foundations across nine web, mobile, merchant, admin, payment gateway, and integration products.

TECHNICAL SKILLS

Front-end

React, Next.js, React Native, TypeScript, JavaScript, HTML5, CSS3, Vite

State Management

Zustand, Redux Toolkit, easy-peasy

UI & Design

Tailwind CSS, Ant Design, shadcn/ui, Design Systems, Figma

Architecture & Integration

Internationalization (i18n), SSE, iframe integration, postMessage, CDN-delivered SDKs

Services & Monitoring

Firebase, Sentry

Version Control & CI/CD

Git, Jenkins

EDUCATION

Bachelor's Degree in Accounting

Major in Auditing

University of Economics Ho Chi Minh City

2013 - 2016

Vietnamese

English

EXPERIENCE (CONTINUED)

6. Payment Gateway v3

- Led the greenfield development of a multi-currency, multilingual gateway with dynamic payment method and provider selection plus merchant-specific themes and checkout flows.
- Implemented Zustand and Server-Sent Events (SSE) for real-time payment-status synchronization, then handed the product to the team while retaining review and quality oversight.

7. Clever Card

- Built the card entry module for adding cards and processing payments, supporting Visa, Mastercard, and JCB.
- Implemented Apple Pay and Google Pay for payment and card-registration flows, along with card data handling and payment processing logic.

8. Payframe

- Engineered Payframe as an embedded component or hosted page, delivered through a script and routed to different card providers based on merchant configuration supplied by the back end.
- Supported postMessage communication, tokenization, 3-D Secure (3DS), saved-card flows, and callbacks, then handed the product over to the team.

9. Merchant SDK

- Re-engineered an existing CDN-delivered JavaScript SDK by simplifying transaction logic, improving runtime performance, and preparing it for team ownership.
- Exposed SDK functions for transaction creation, checkout iframe launch, merchant authentication, and postMessage communication, with supporting documentation and examples.
